

Beginning Digital Photography

Digital course work in each session is designed for working professionals from the communication arts field, school teachers and amateur photographers. Skills and techniques will be acquired to control digital camera functions and data media in the everyday world. Basic imaging skills using a digital camera and digital imaging technology and software computer will be explored. Software to manage and edit image libraries will be introduced. Teachers will have the option to receive CEU's, in-service professional development points and or complete sessions as IPDP professional development study.
